

PC Check & Tuning

**The secure & reliable solution
for optimizing and accelerating your PC**

MAGIX PC Check & Tuning Free 2011

MAGIX PC Check & Tuning Free 2011 is the free software solution for intelligent testing, maintenance, and acceleration of PCs and laptops running Windows® XP™, Vista®™, and Windows® 7.

Is your PC or laptop too slow?
In one step, the program analyzes the computer, detecting problems and removing them automatically.

Incl. automatic tuning feature PC Check Live and software updates for all installed programs!

Get the maximum out of your PC

15 years experience in PC analysis & maintenance

The integrated system analysis is based on MAGIX' 15 years of experience in technical customer service and has already been implemented on thousands of computers. PC Check & Tuning Free 2011 noticeably improves the performance of your PC, detects errors, removes problems and guarantees stability of the whole system.

Don't wait! Download the free all-in-one solution for all of your PC problems now!

Highlights at a glance

NEW! System start analysis

- Locate and remove features that slow down system start
- Time savings during PC start-up

NEW! Software update

- Provides updates for all installed programs
- Closes security gaps by updating software
- Direct connection to a comprehensive software catalog

IMPROVED! Automatic tuning

- Analyzes weaknesses at high speed
- Finds and solves problems in one step

IMPROVED! PC Check Live

- Monitors system performance non-stop and resource efficiently
- Informs you of available program updates
- Warns in case of problems or instability

MORE! Acceleration

- Starts Windows, applications, and games faster
- Accelerates programs & increases PC performance

MORE! Memory

- Removes superfluous and temporary files upon request
- Cleans hard drives

Automatic tuning

The "PC Check" section is the central area of the program. These integrated tuning tools analyze weaknesses at high speed, identify problems and solve them in just one step. That way, you will find time for the really important things again.

Examine PC

The "Check PC" function checks your PC for possible problems and errors. The results are displayed in a report, and suitable solutions are also suggested. Individual test results are visualized as traffic lights.

Fix all problems

The red lights indicate where maintenance or optimizations have to be conducted. The button "Fix all problems" bundles the individual activities and carries them out in a single step.

Check area

Use "Settings" to easily determine which optimizations should be included in automatic tuning.

PC Check Live

The problem scanner

Just as a virus scanner protects against virus attacks, MAGIX PC Check Live protects your PC against reduction in PC performance. PC Check Live monitors non-stop while you work and gives you a feeling of security. You will be informed in case of problems or if program updates are available.

Always up to date

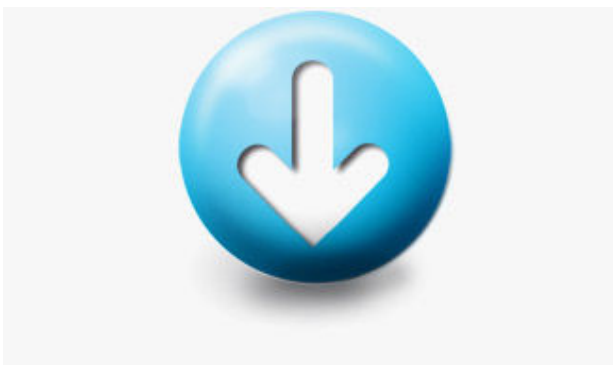

Thanks to the advanced update feature, this software ensures that your programs are regularly updated with improvements and technical adjustments (e.g. for new operating systems). On top of that, it adds current knowledge for removing system errors to the integrated database.

More customization

Via the "Settings" menu you can configure your PC check list individually and help decide what will be checked in the course of continuous tests.

NEW! Software update

Updates outdated software!

Outdated programs on your system are always a major security risk. PC Check & Tuning Free 2011 creates a list of all of the software programs installed on your PC, checks whether they are up-to-date and whether new versions are available. Thanks to the direct connection of the software update function to a comprehensive software catalog, new versions can be downloaded immediately and security gaps closed.

Increase PC performance

Now using your PC or notebook computer will be fun all over again!

After all optimizations with PC Check & Tuning Free 2011 have been conducted, your system will be noticeably faster: Windows, programs and games will load more quickly. Application performance will be accelerated and your system's overall performance will be improved. The intelligent program functions ensure efficient PC utilization and create more stability. The result: you can work faster and experience fewer crashes.

Clean up and defragment the registry

Free your Windows registry of invalid and fragmented entries!

Superfluous, invalid, or fragmented entries in the Windows registry may reduce PC performance and may even lead to system instability. With these integrated functions, the program automatically scans the registry for such problems and repairs them.

Driver check & download

Drivers for over 30,000 devices – constantly being updated!

The integrated driver download service saves you from having to search for drivers on your PC hardware manufacturers' pages. Matching drivers for over 31,200 hardware components are available to you. The currency and compatibility of all your system drivers are checked with one click: If new drivers are available for your computer, they may be easily downloaded and directly installed.

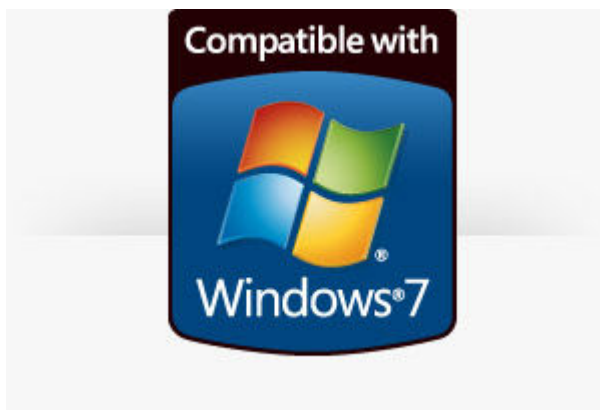

Community Connection

magix.info - the Multimedia Community

Profit from the complete PC and multimedia knowledge of over 40,000 members collected online!

The direct connection to the "magix.info" Multimedia Knowledge Community makes it possible for you to easily search for the right solutions for your individual needs or ask specific questions on the topic of multimedia.

Additionally you will find a wide spectrum of courses offered by the MAGIX Academy. All dates and topics are constantly updated at www.magix.info under Courses & Dates.

Compatible with Windows® 7

For Microsoft® Windows® XP | Vista® | 7

MAGIX PC Check & Tuning Free 2011 has been tested for operational conformity and functional security in Windows® 7™.

The advantage: If you have upgraded to the new Windows® operating system, you will be able to continue to use this product as usual.
